Gaming on AWS Develop, Operate and Analyze on Cloud

AGENDA

GameLift for Session-based Games

GameLift Deep Dive

GameLift Demo

Imagine for a moment...

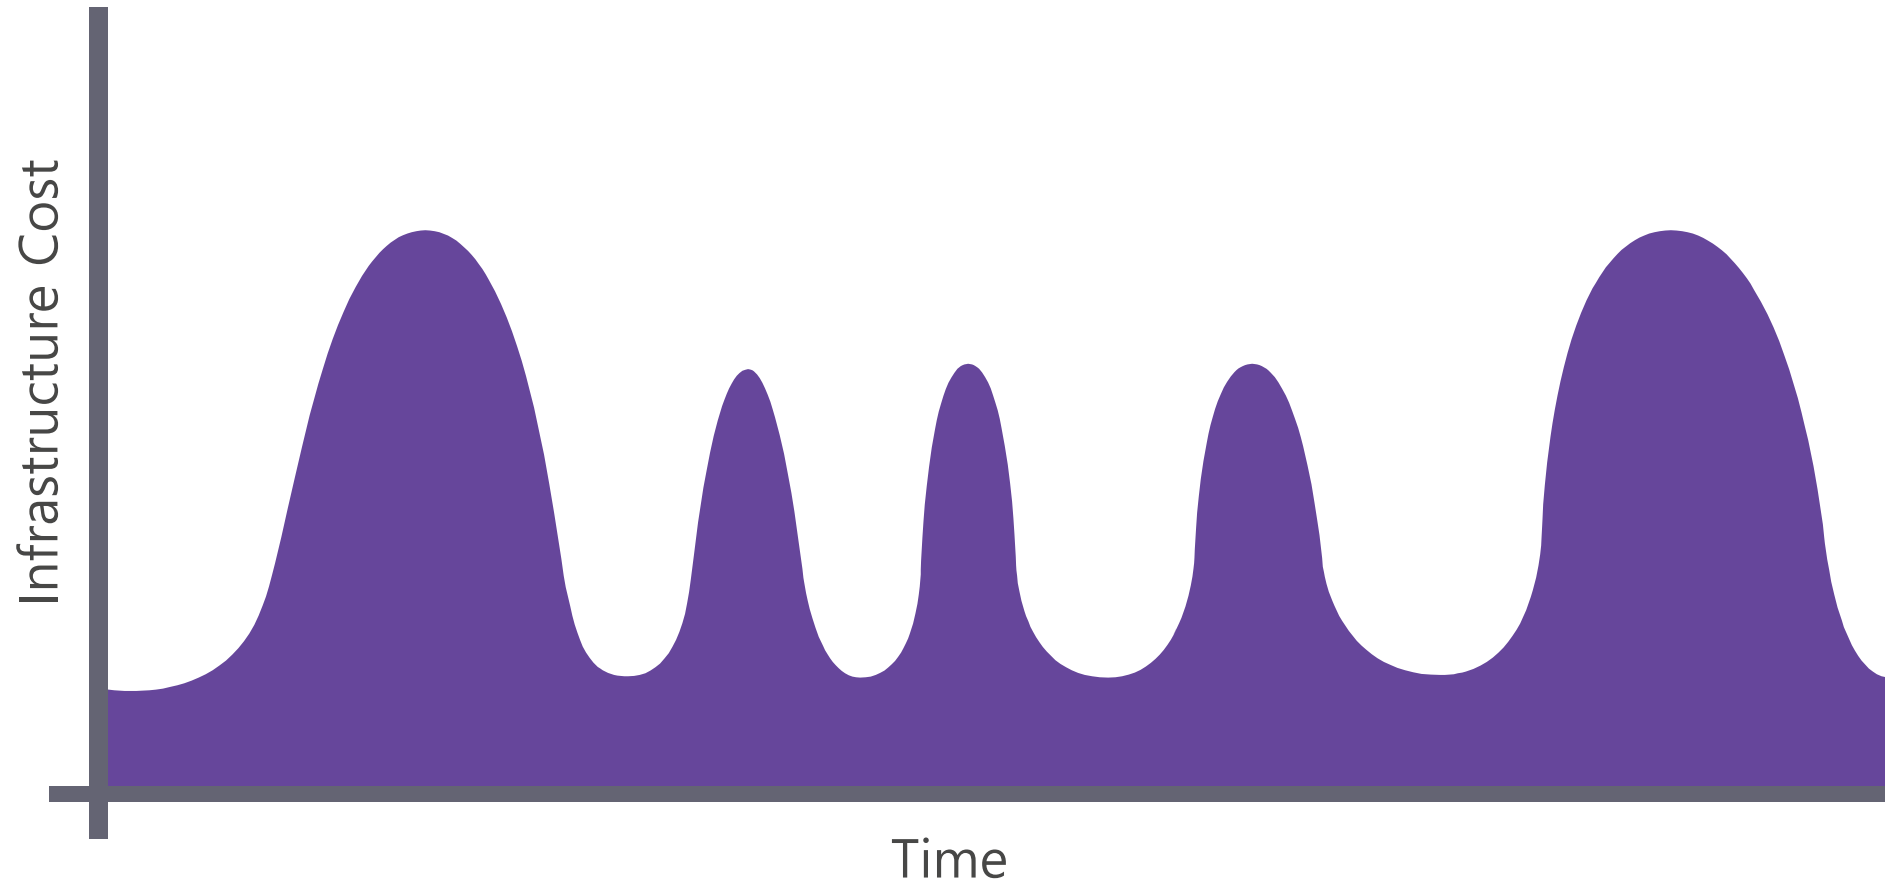

Scaling multiplayer games is hard

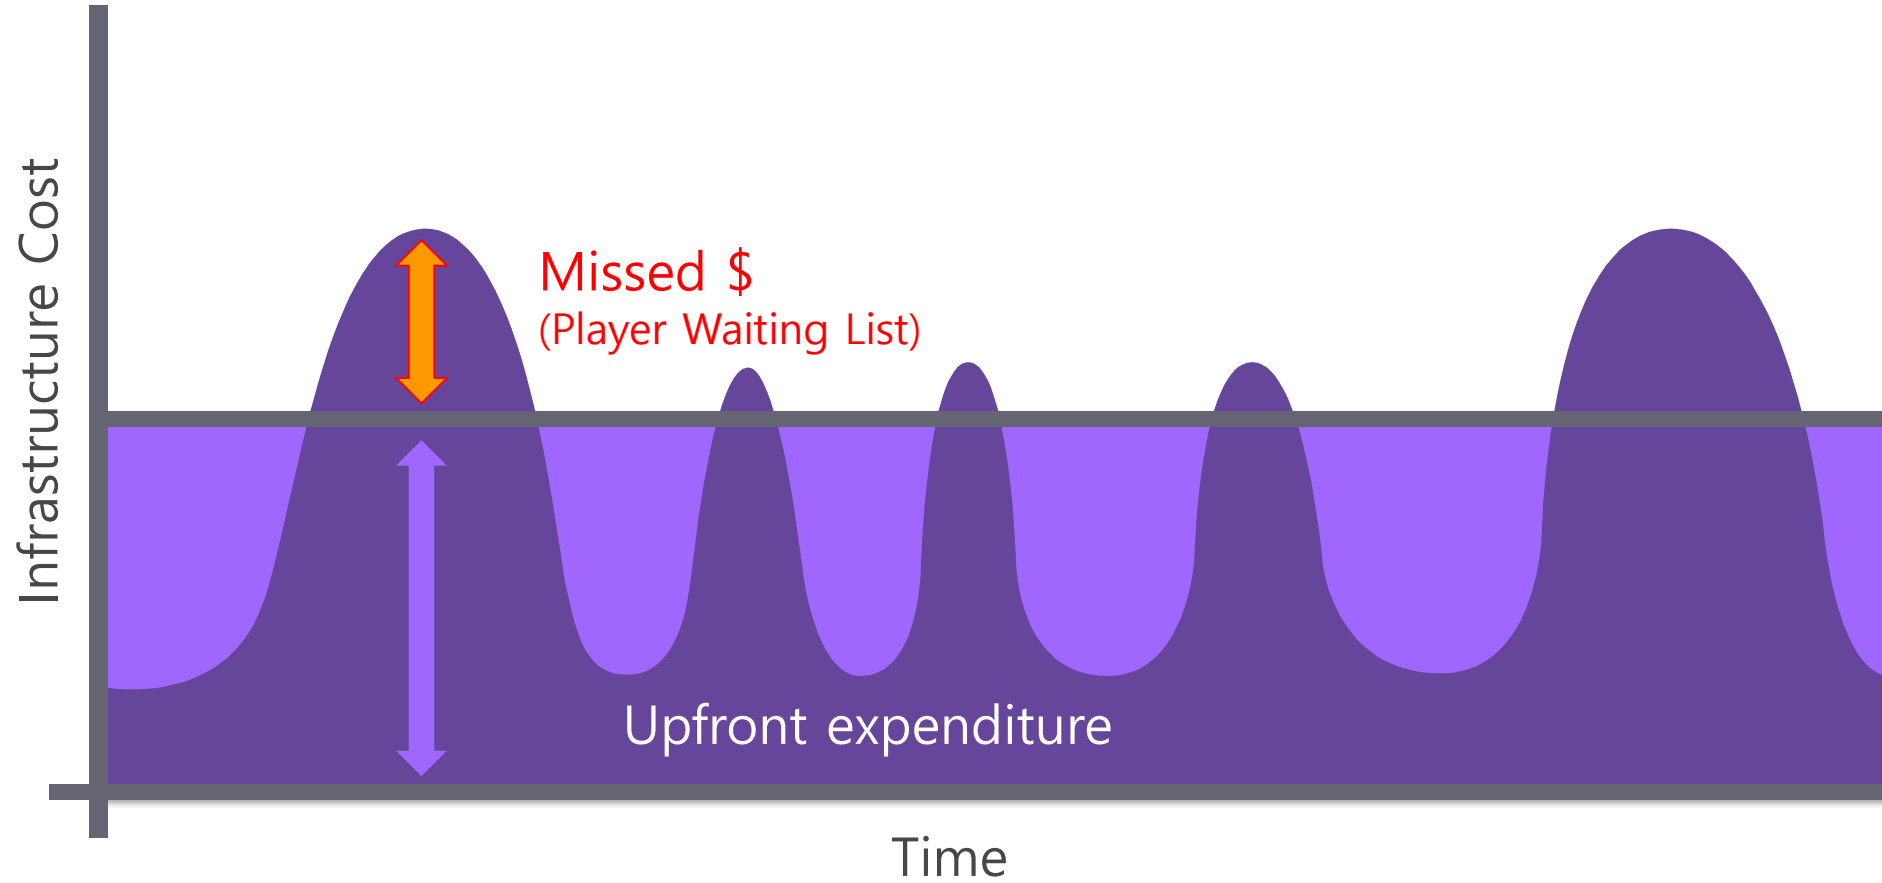

**Deploy and scale multiplayer games, in minutes
with Amazon GameLift**

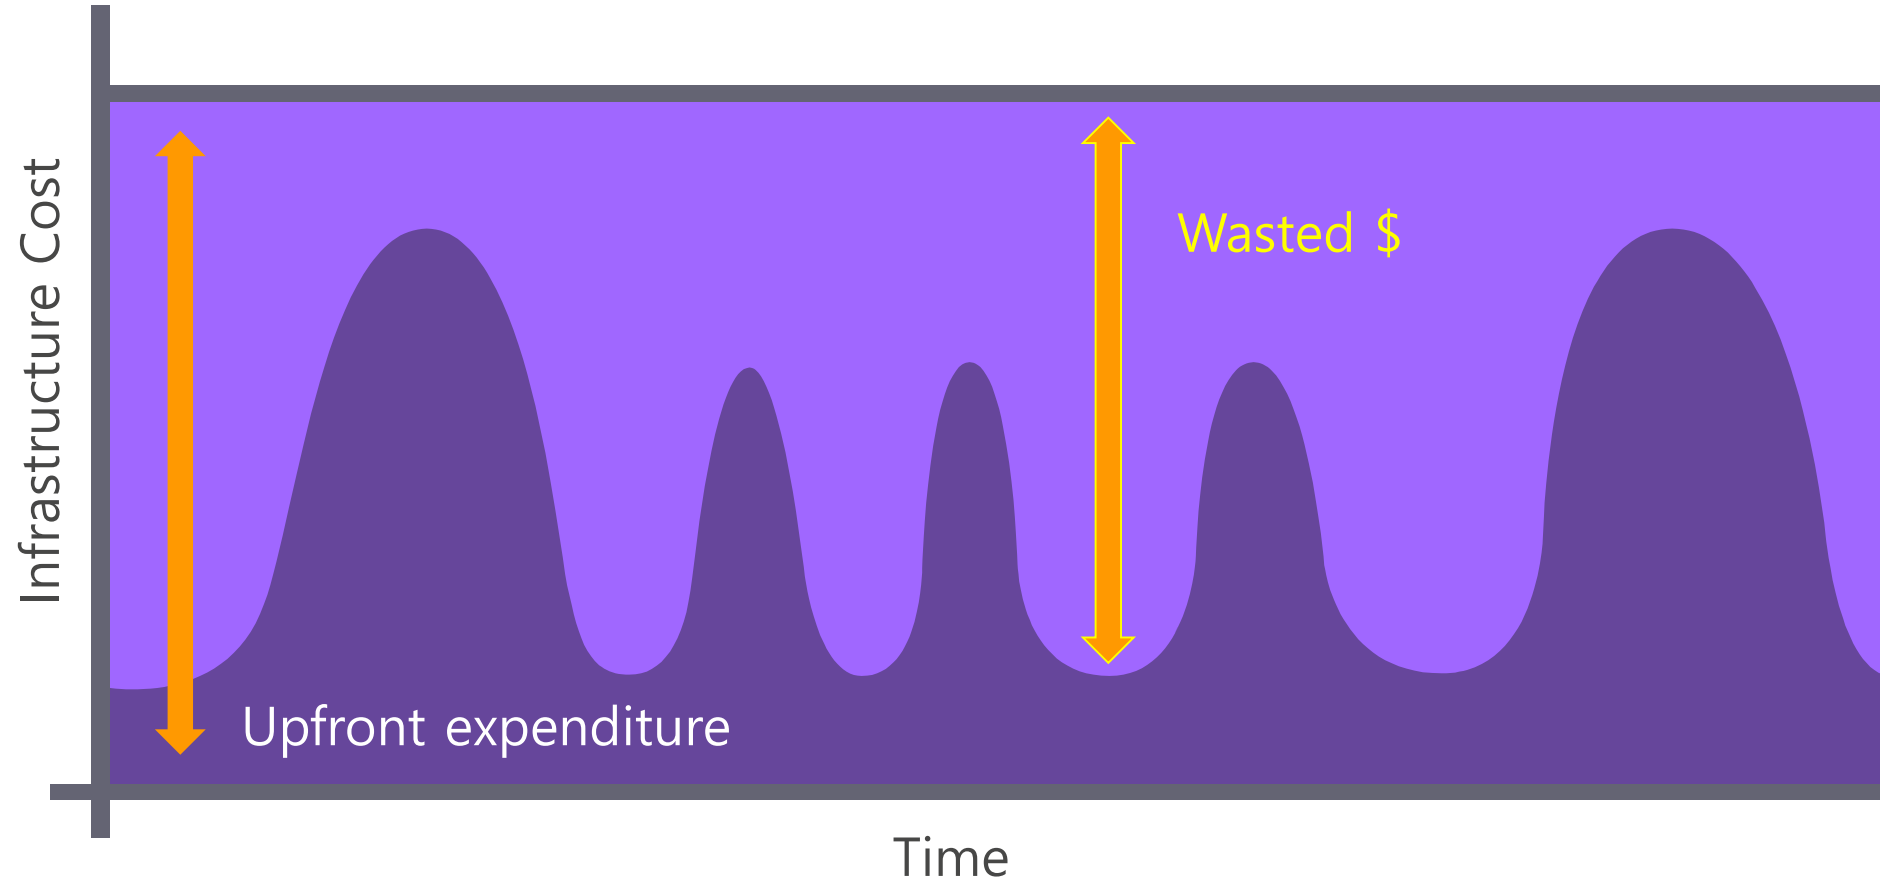

Typical Weekly Game Demand Curve

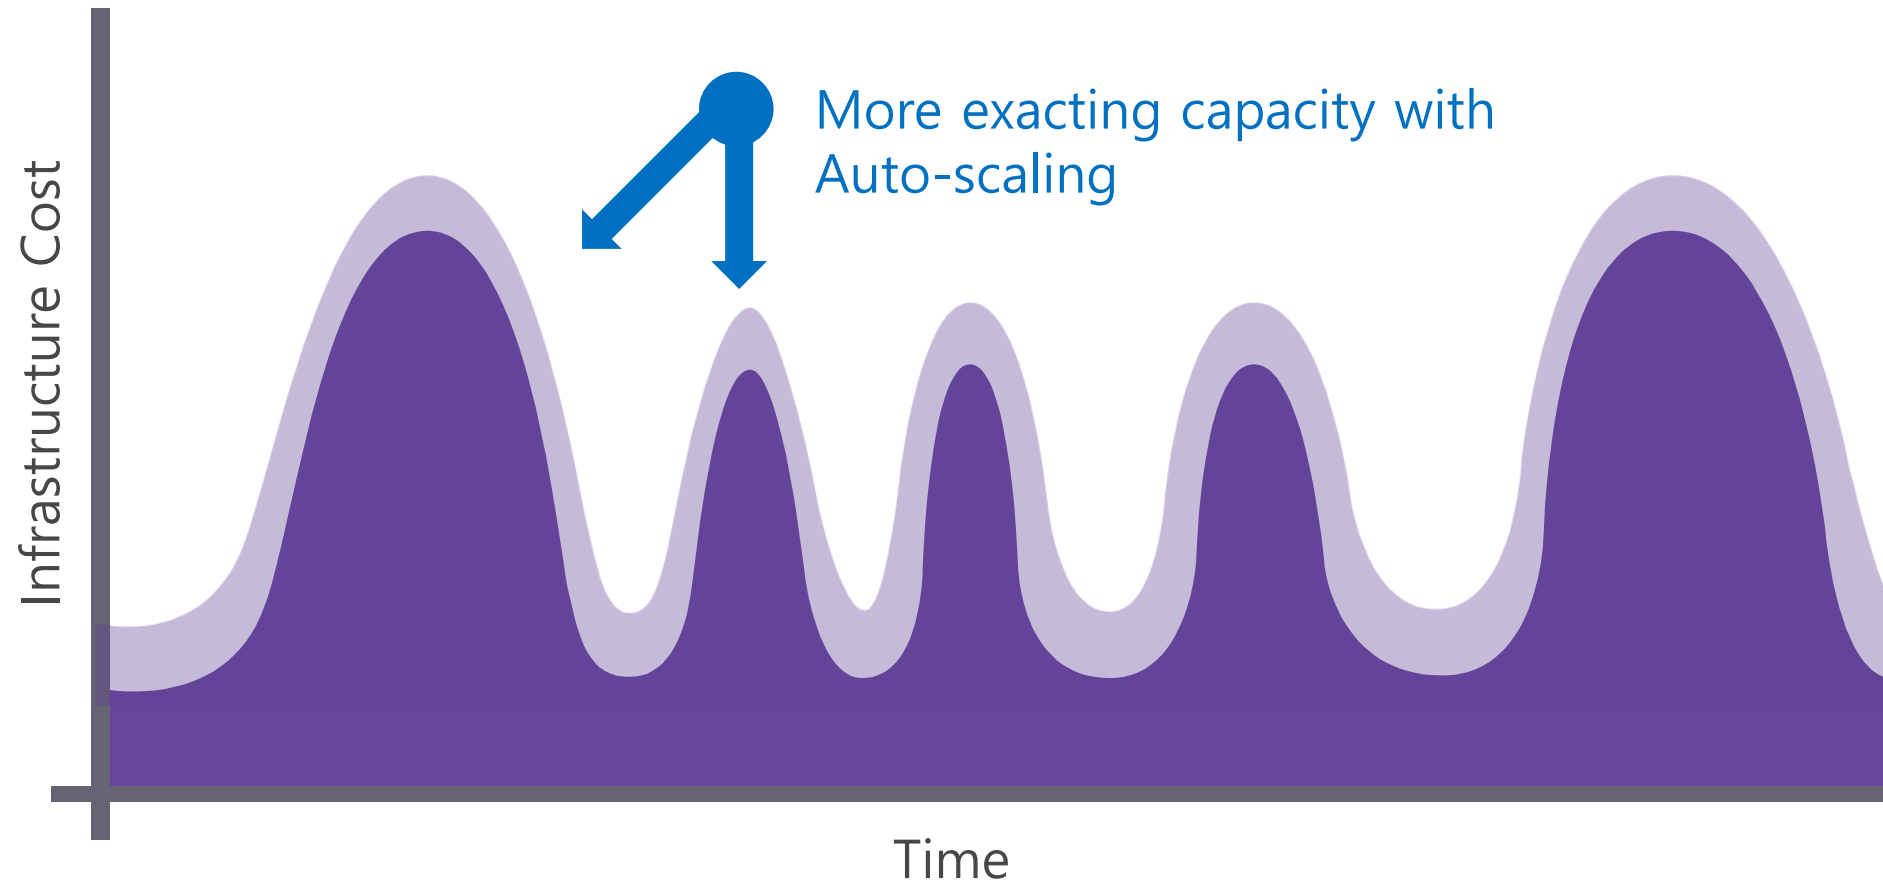

Under Capacity

Over Capacity

GameLift Autoscaling

Amazon GameLift

- Managed service for hosting session-based multiplayer game servers
- Automatically scale up and down to meet player demand, as needed
- Deliver low-latency player experiences around the world
- Release live updates with no downtime
- Pay only for what you use

Designed for Session-based Games

Asynchronous

Persistent

Session

Top 10 Multiplayer Games in Korea

Gametrics Index

게임순위 2016년 9월 27일

| 순위 | 게임정보 | 점유율 |
|------|--|--------|
| 1 ▲1 |  오버워치 14주 1위 블리자드 블리자드 | 29.08% |
| 2 ▼1 | 리그 오브 레전드 | 26.03% |
| 3 - | 피파온라인3 | 7.71% |
| 4 - | 서든어택 | 5.82% |
| 5 ▲1 | 스타크래프트 | 2.99% |
| 6 ▼1 | 던전앤파이터 | 2.95% |
| 7 - | 월드 오브 워크래프트 | 2.44% |
| 8 ▲1 | 리니지 | 1.91% |
| 9 ▼1 | 메이플 스토리 | 1.76% |
| 10 - | 블레이드 & 소울 | 1.47% |

Session-based

MMOG

Hire 4+ *expert* engineers
Give them thousands of hours to:

Design & architect

Build a prototype

Build again for production

Debug and fix nasty scaling issues

Build a UI dashboard

Launch

Provide 24/7 post-launch coverage

Optimize for cost

Easy to use. Start in minutes.

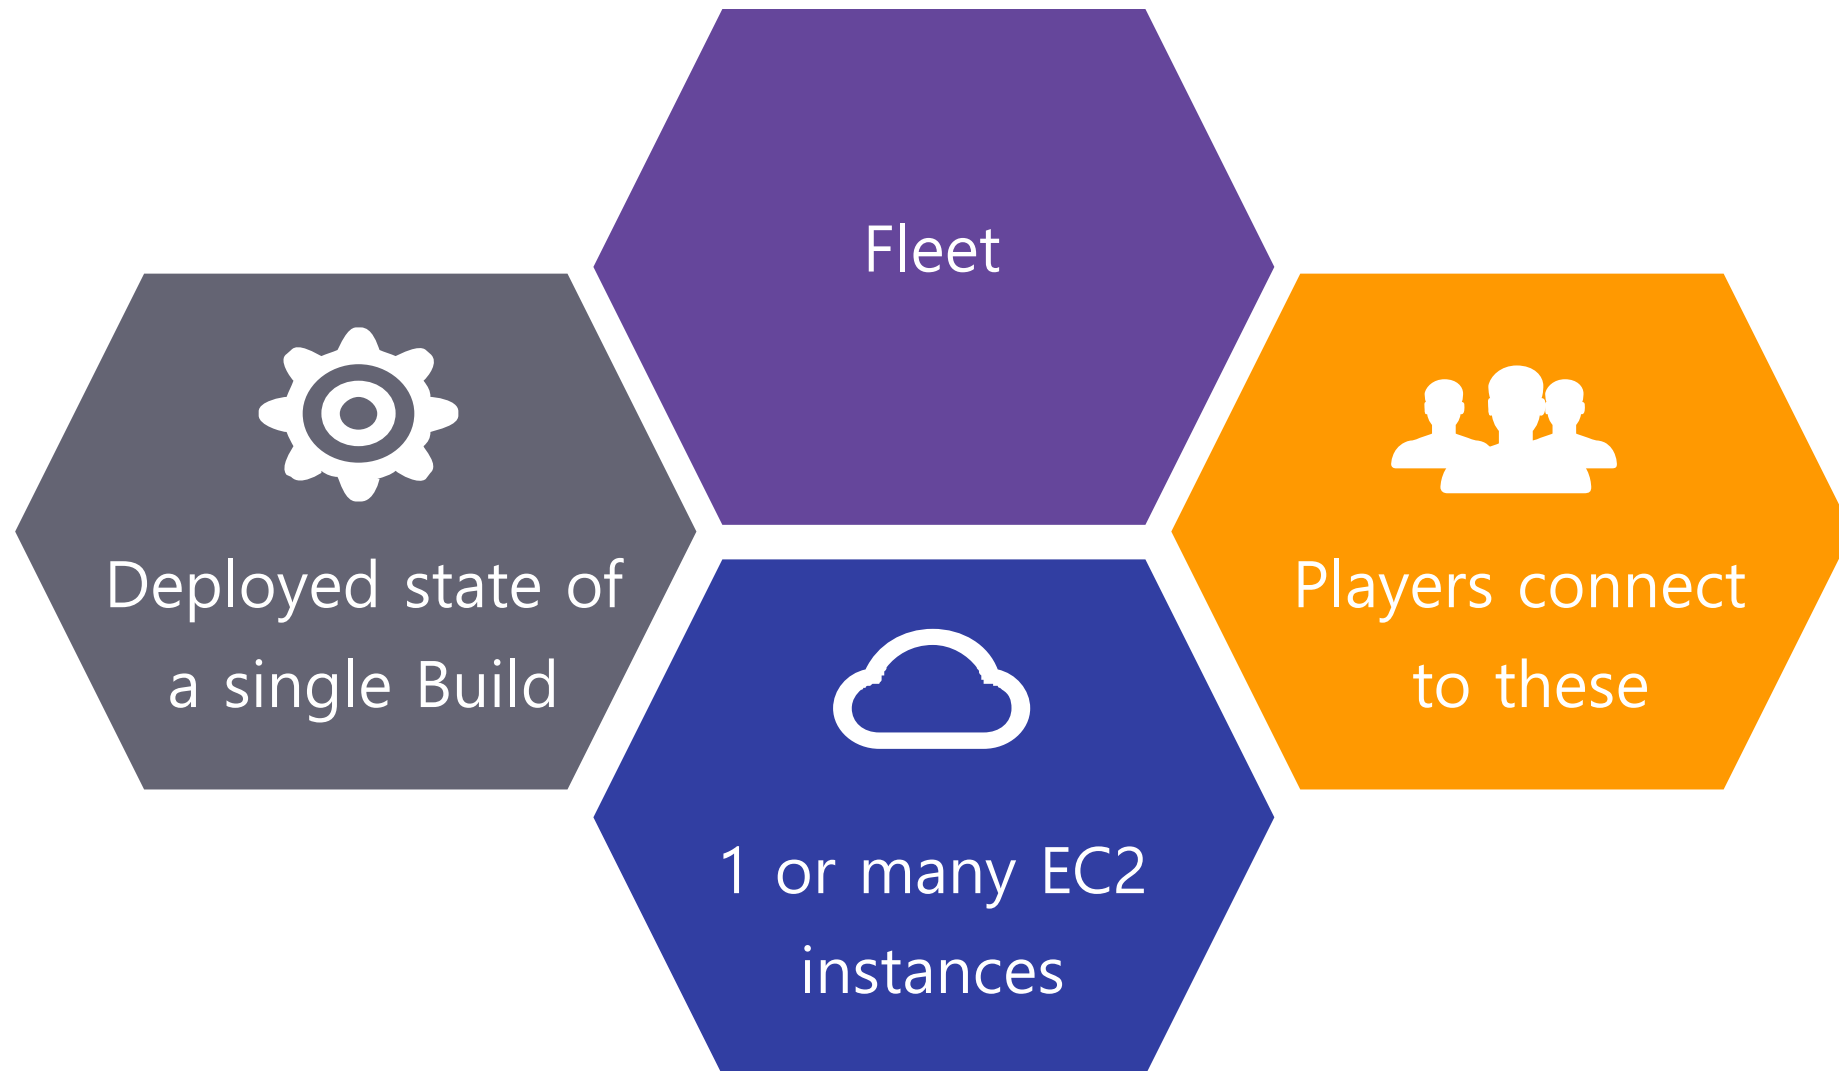

GameLift Deep Dive

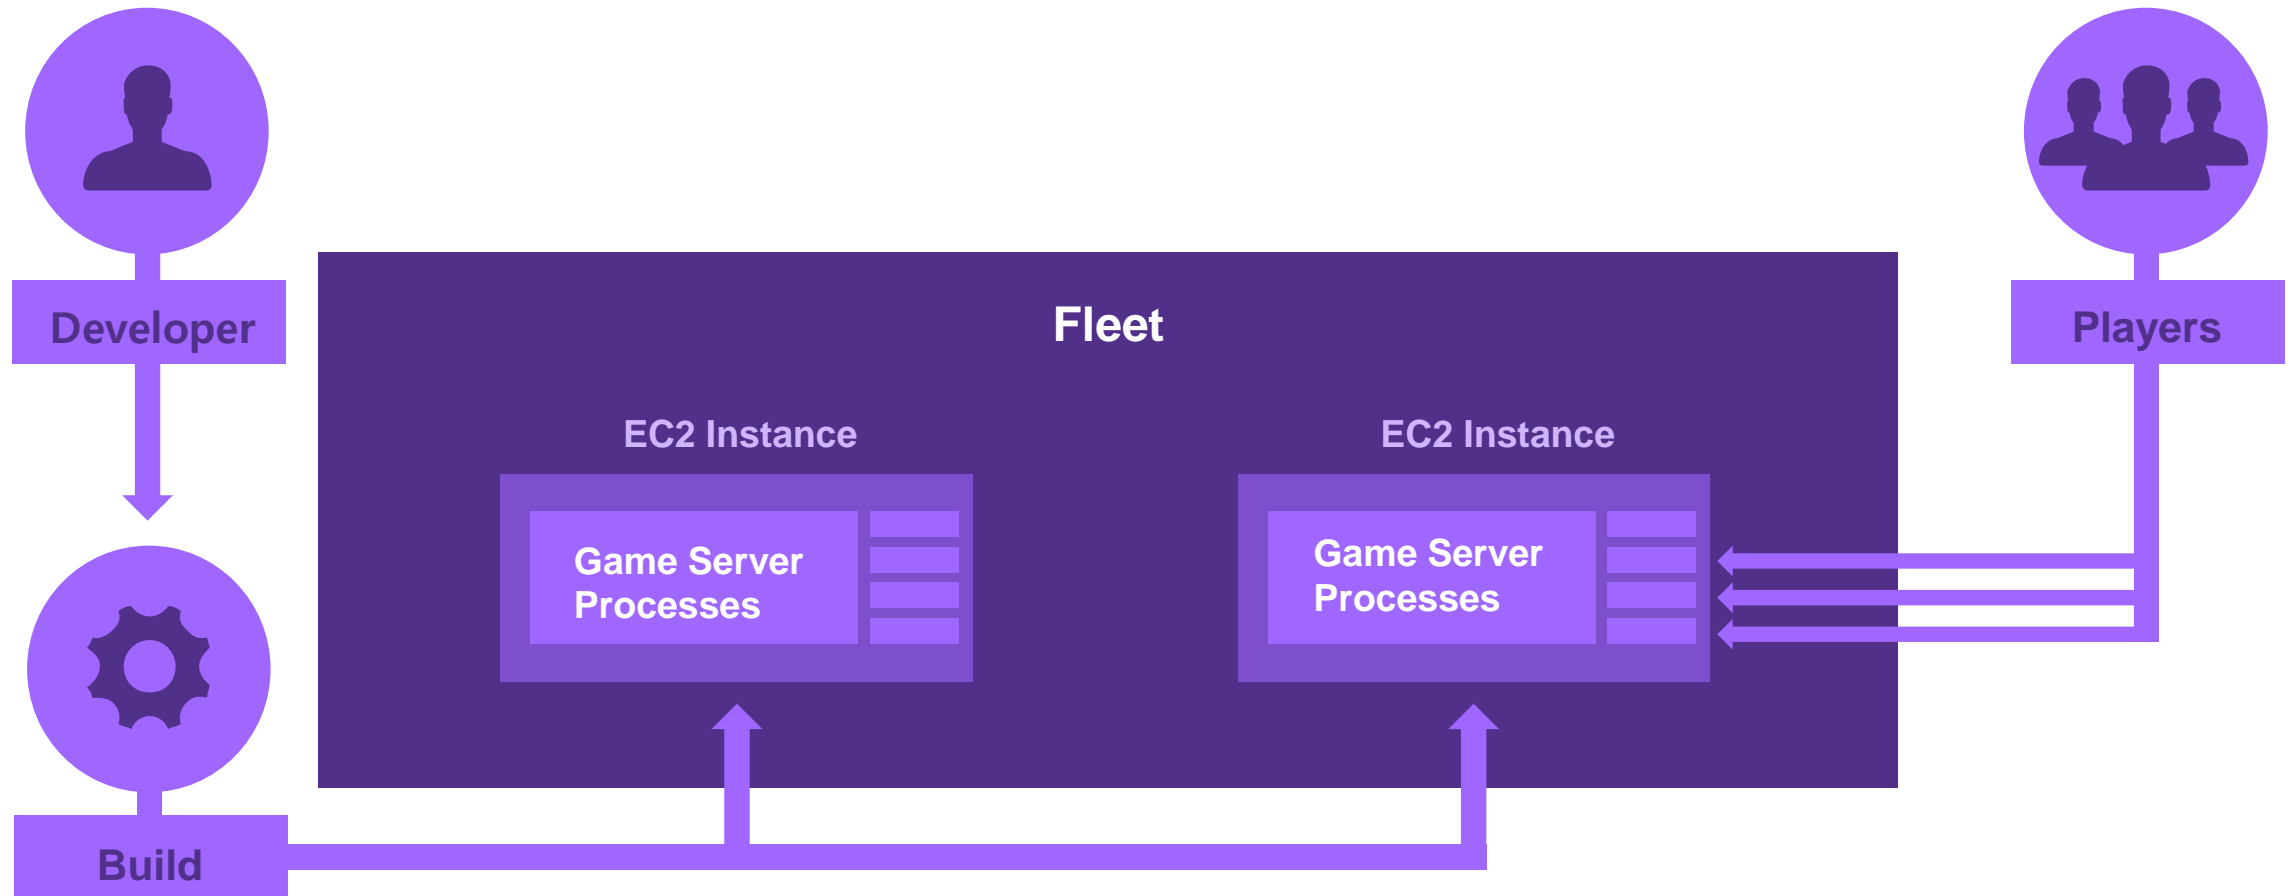

Build

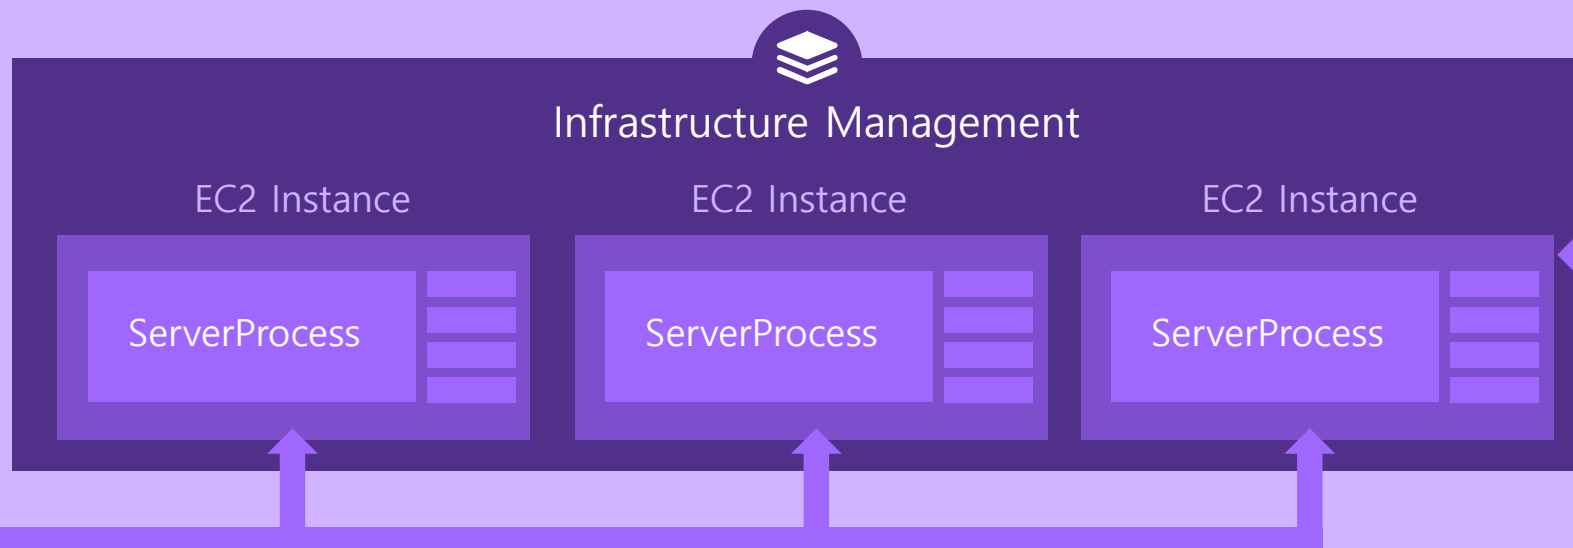

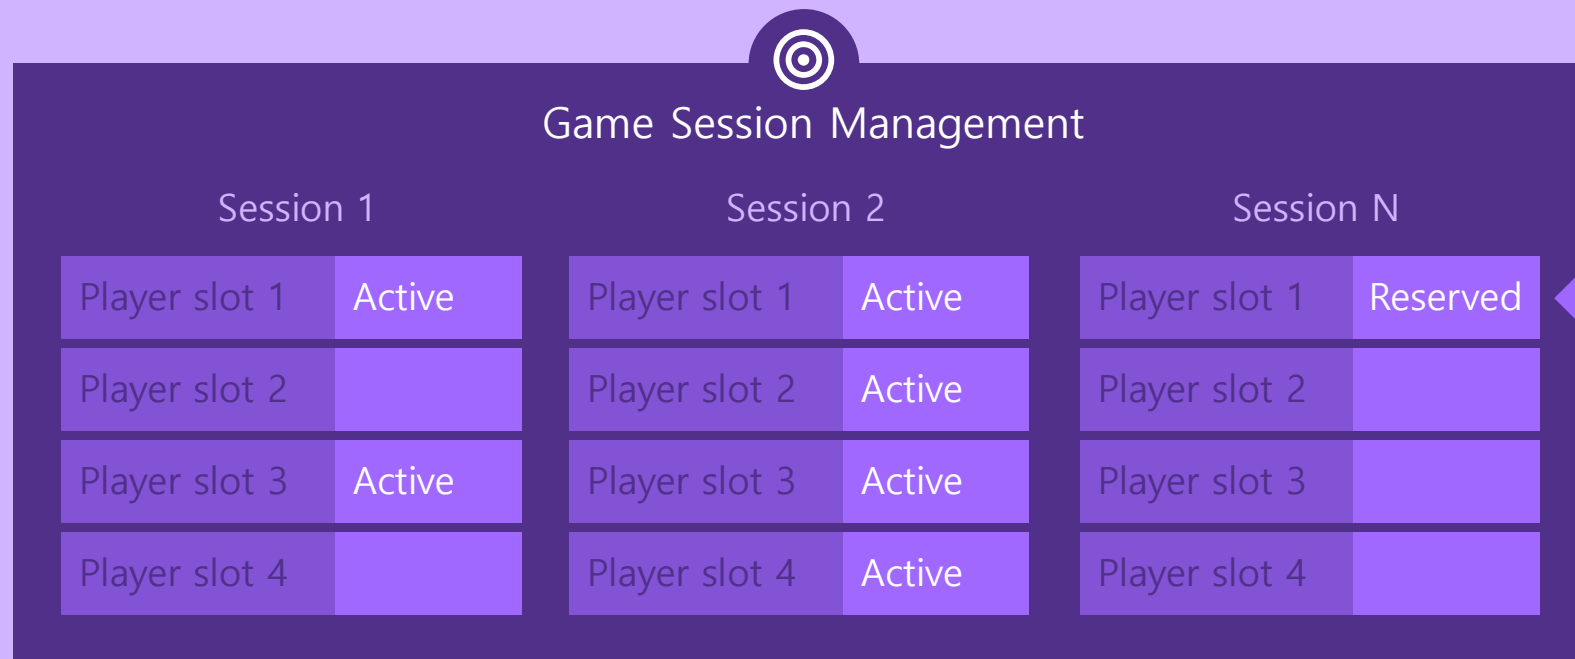

Fleet

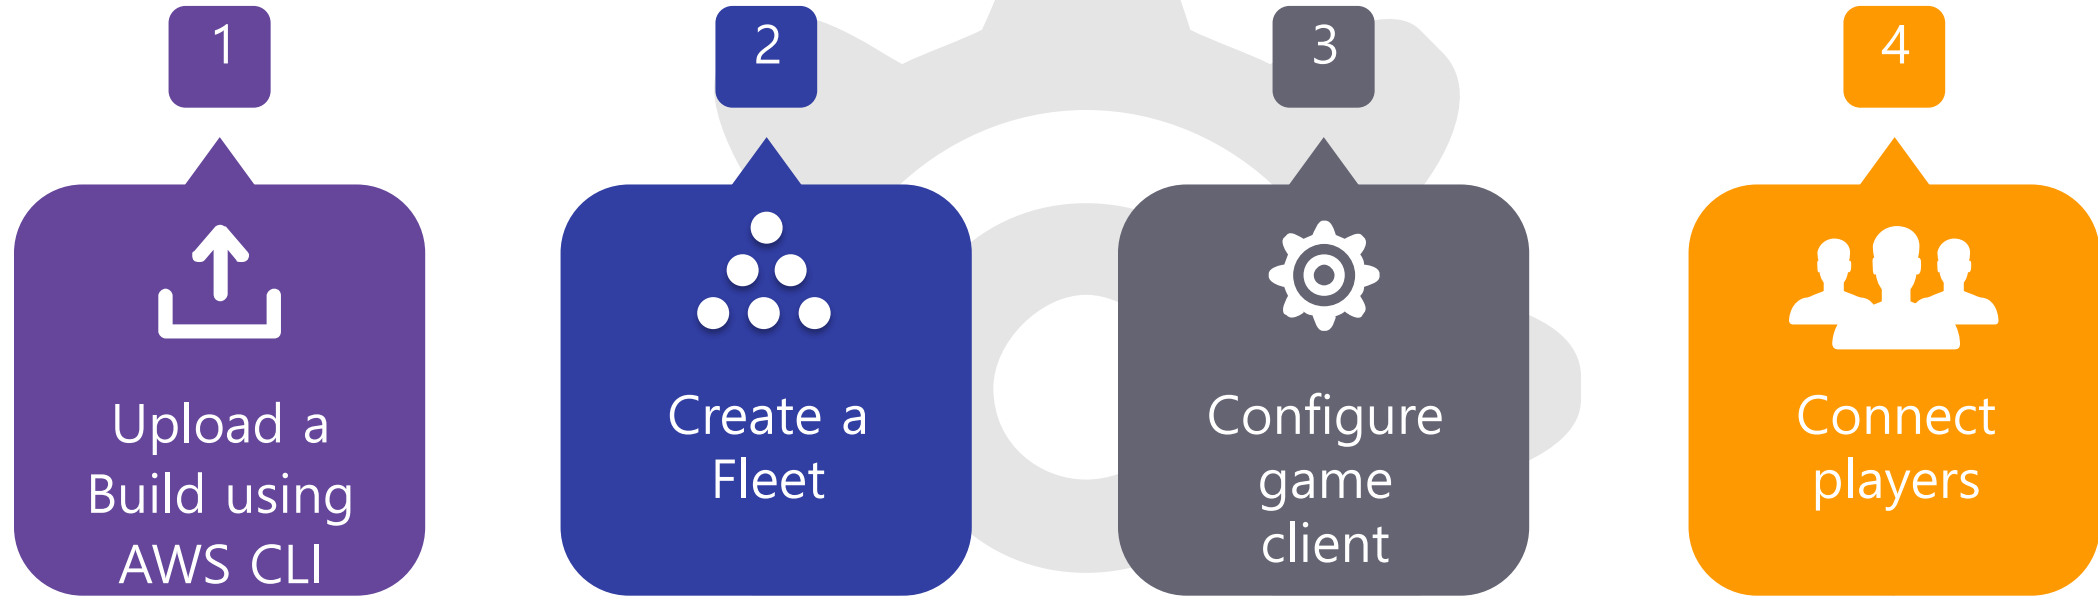

Fleet Overview

Simple Dev Environment: 4 Steps

GameLift provides game session searching/matching
(Game session status, sorting, players status, ...)

Upload a Build

- AWS CLI

aws gamelift upload-build --name <build name> --build-root <folder> --operating-system <WINDOW_2012 or AMAZON_LINUX> --region <region>

Create fleet from buildDelete build

| Filter: Status: All ▾ | | | | | | | | | Viewing 18 build(s) | |

Fleet Configuration

- EC2 instance type
- Execution file name, parameters, concurrent process count
- Open port, protocol, CIDR
- Auto-scaling policy

Instance type

Select an instance type to determine the computing resources that will be used to run your dedicated game servers on this fleet. All Amazon GameLift instances include 50 GB of elastic block storage (EBS). Instances for this fleet are either Windows or Linux, depending on the operating system of the selected build. For more details, see [EC2 Instance Types](#). Instance type cannot be changed once the fleet is created.

| | Family | Instance type | vCPU | Memory (GB) | Instance stor... | Network perf... |
|----------------------------------|-------------------|------------------------------------|------|-------------|------------------|-----------------|
| <input checked="" type="radio"/> | Compute optimized | c3.large Free tier | 2 | 3.75 | 50GB EBS only | Moderate |
| <input type="radio"/> | General purpose | t2.micro | 1 | 1 | 50GB EBS only | Low to moderate |
| <input type="radio"/> | General purpose | t2.small | 1 | 2 | 50GB EBS only | Low to moderate |
| <input type="radio"/> | General purpose | t2.medium | 2 | 4 | 50GB EBS only | Low to moderate |
| <input type="radio"/> | General purpose | t2.large | 2 | 8 | 50GB EBS only | Low to moderate |
| <input type="radio"/> | General purpose | m4.large | 2 | 8 | 50GB EBS only | Moderate |
| <input type="radio"/> | General purpose | m4.xlarge | 4 | 16 | 50GB EBS only | High |

Capacity allocation - New

Based on the processing capacity of the selected instance type, specify how many server processes can run concurrently on each instance without exceeding resources, and configure how to launch each server process. To run more than one server executable or use different launch parameters, add more configurations.

| Launch path* | Launch parameters | Concurrent processes* | |
|--------------------------------|-------------------|-----------------------|---|
| C:\game\GameLiftGameServer.exe | 5999 | 1 |   |
| C:\game\GameLiftGameServer.exe | 1935 | 1 |   |

[+ Add configuration](#) *Multiple configurations and concurrent processes are supported with game servers using the Amazon GameLift SDK v.3.0+ (included in Lumberyard v.1.4+). Game servers using earlier versions can support only one concurrent process. If the fleet is configured for more than one concurrent process, it will fail to activate.*

EC2 port settings

Set IP address and port ranges to allow inbound access to games on this fleet. Each server process in this fleet must use an IP address and port in these ranges.

| Port range* | Protocol* | IP address range* | |
|-------------|-----------|-------------------|---|
| 1935-1935 | TCP | 0.0.0.0/0 |   |
| 5999-5999 | TCP | 0.0.0.0/0 |   |

[+ Add port settings](#)

Automatic scaling policies

Allow GameLift to automatically scale for you. You can add as many policies to your fleet as needed.

Name* Safe Scaling Policy

Rule* If are for minutes, then 

Name* Scale Up

Rule* If are for minutes, then 

Name* Scale Down gogo

Rule* If are for minutes, then 

[Add Policy](#)

Fleet Creation

Fleets

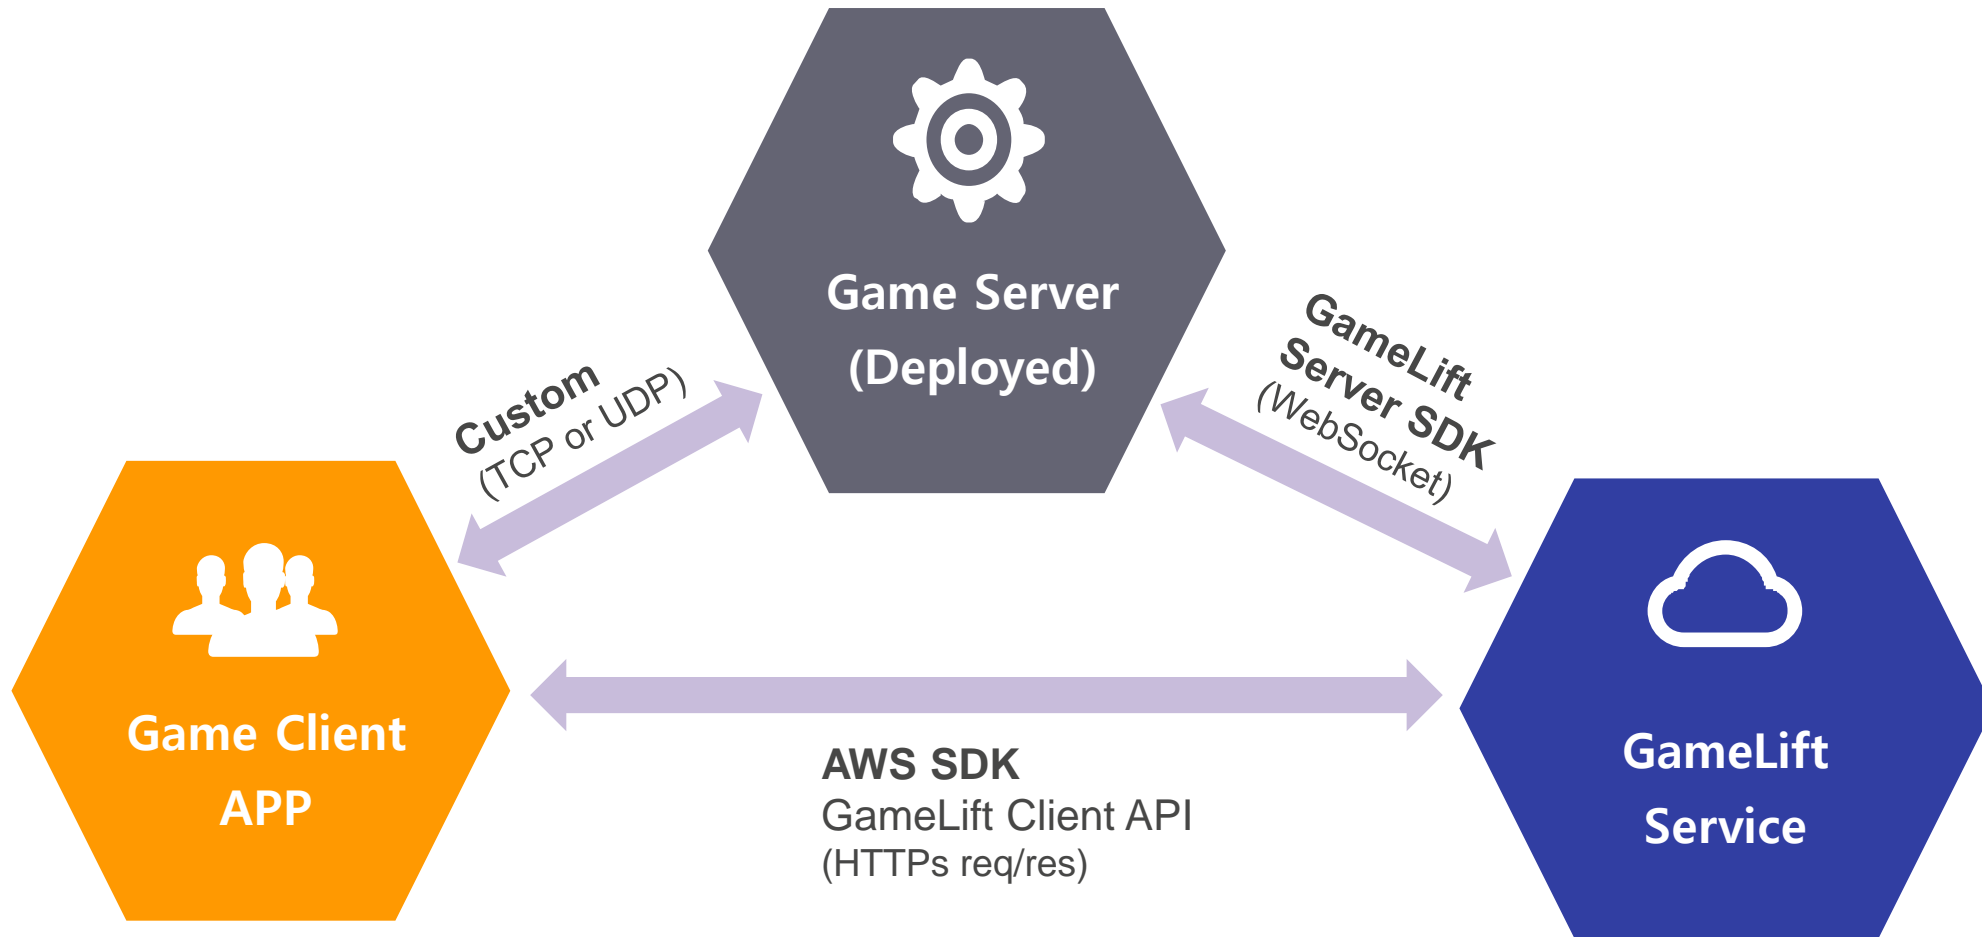

Monitor metrics for your fleets, including the number of active game sessions and number of active and available player sessions.

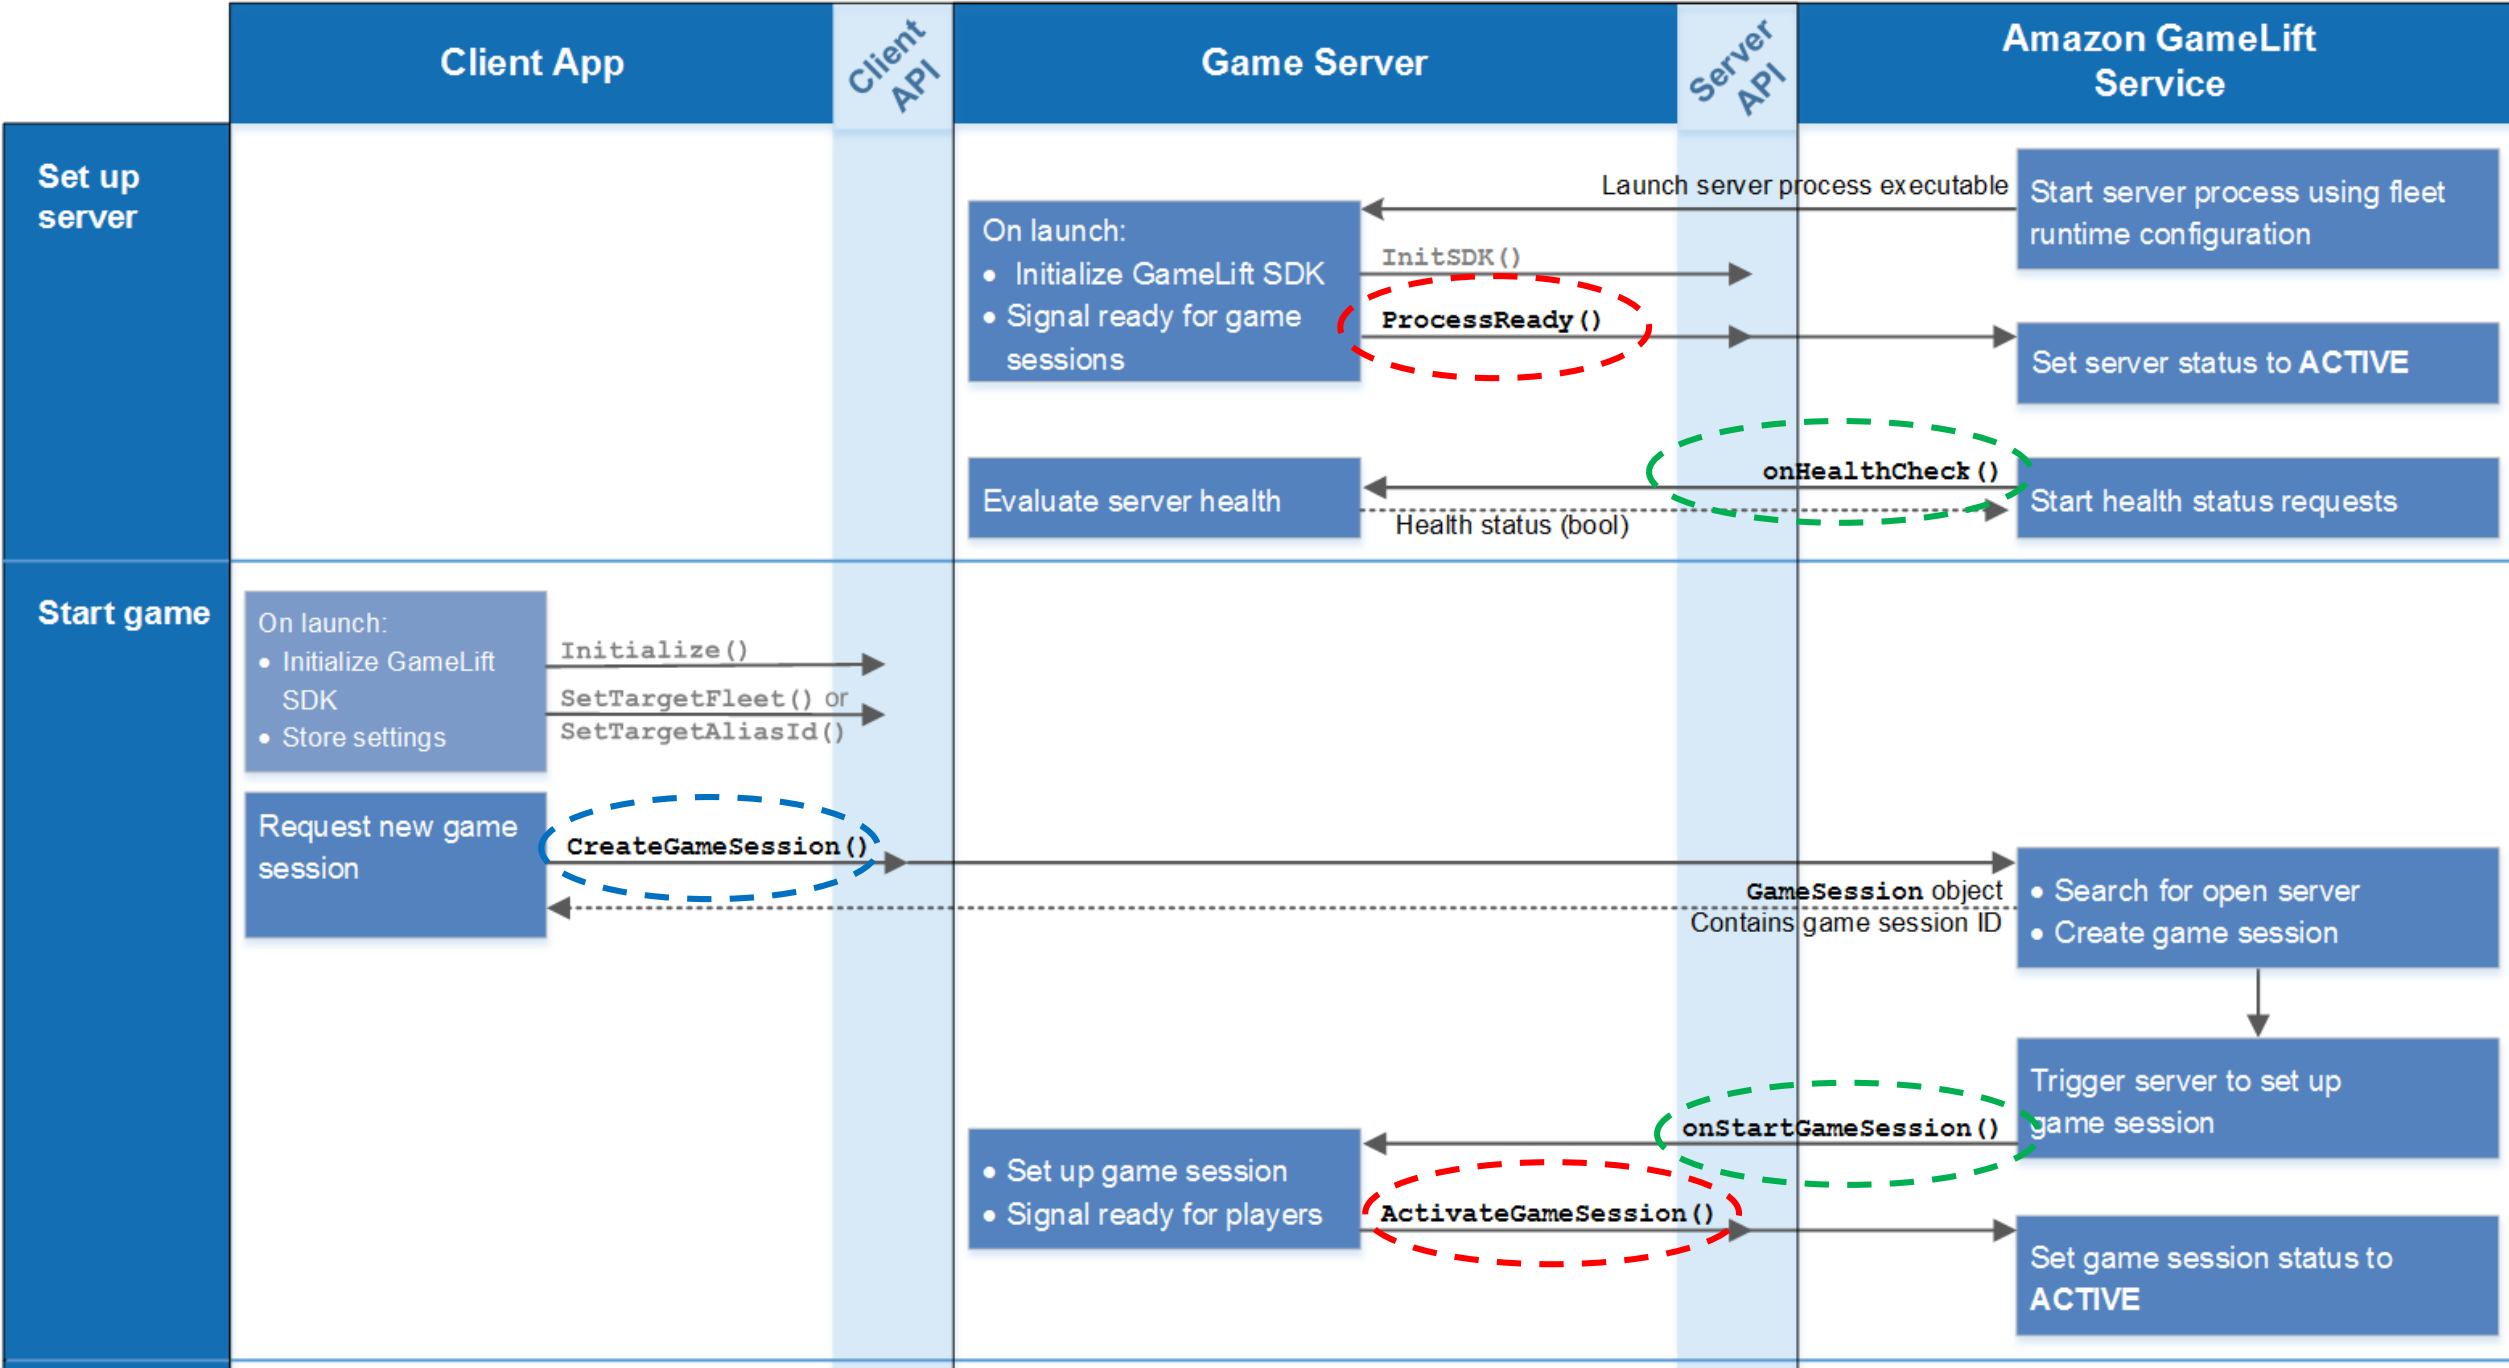

Create fleet

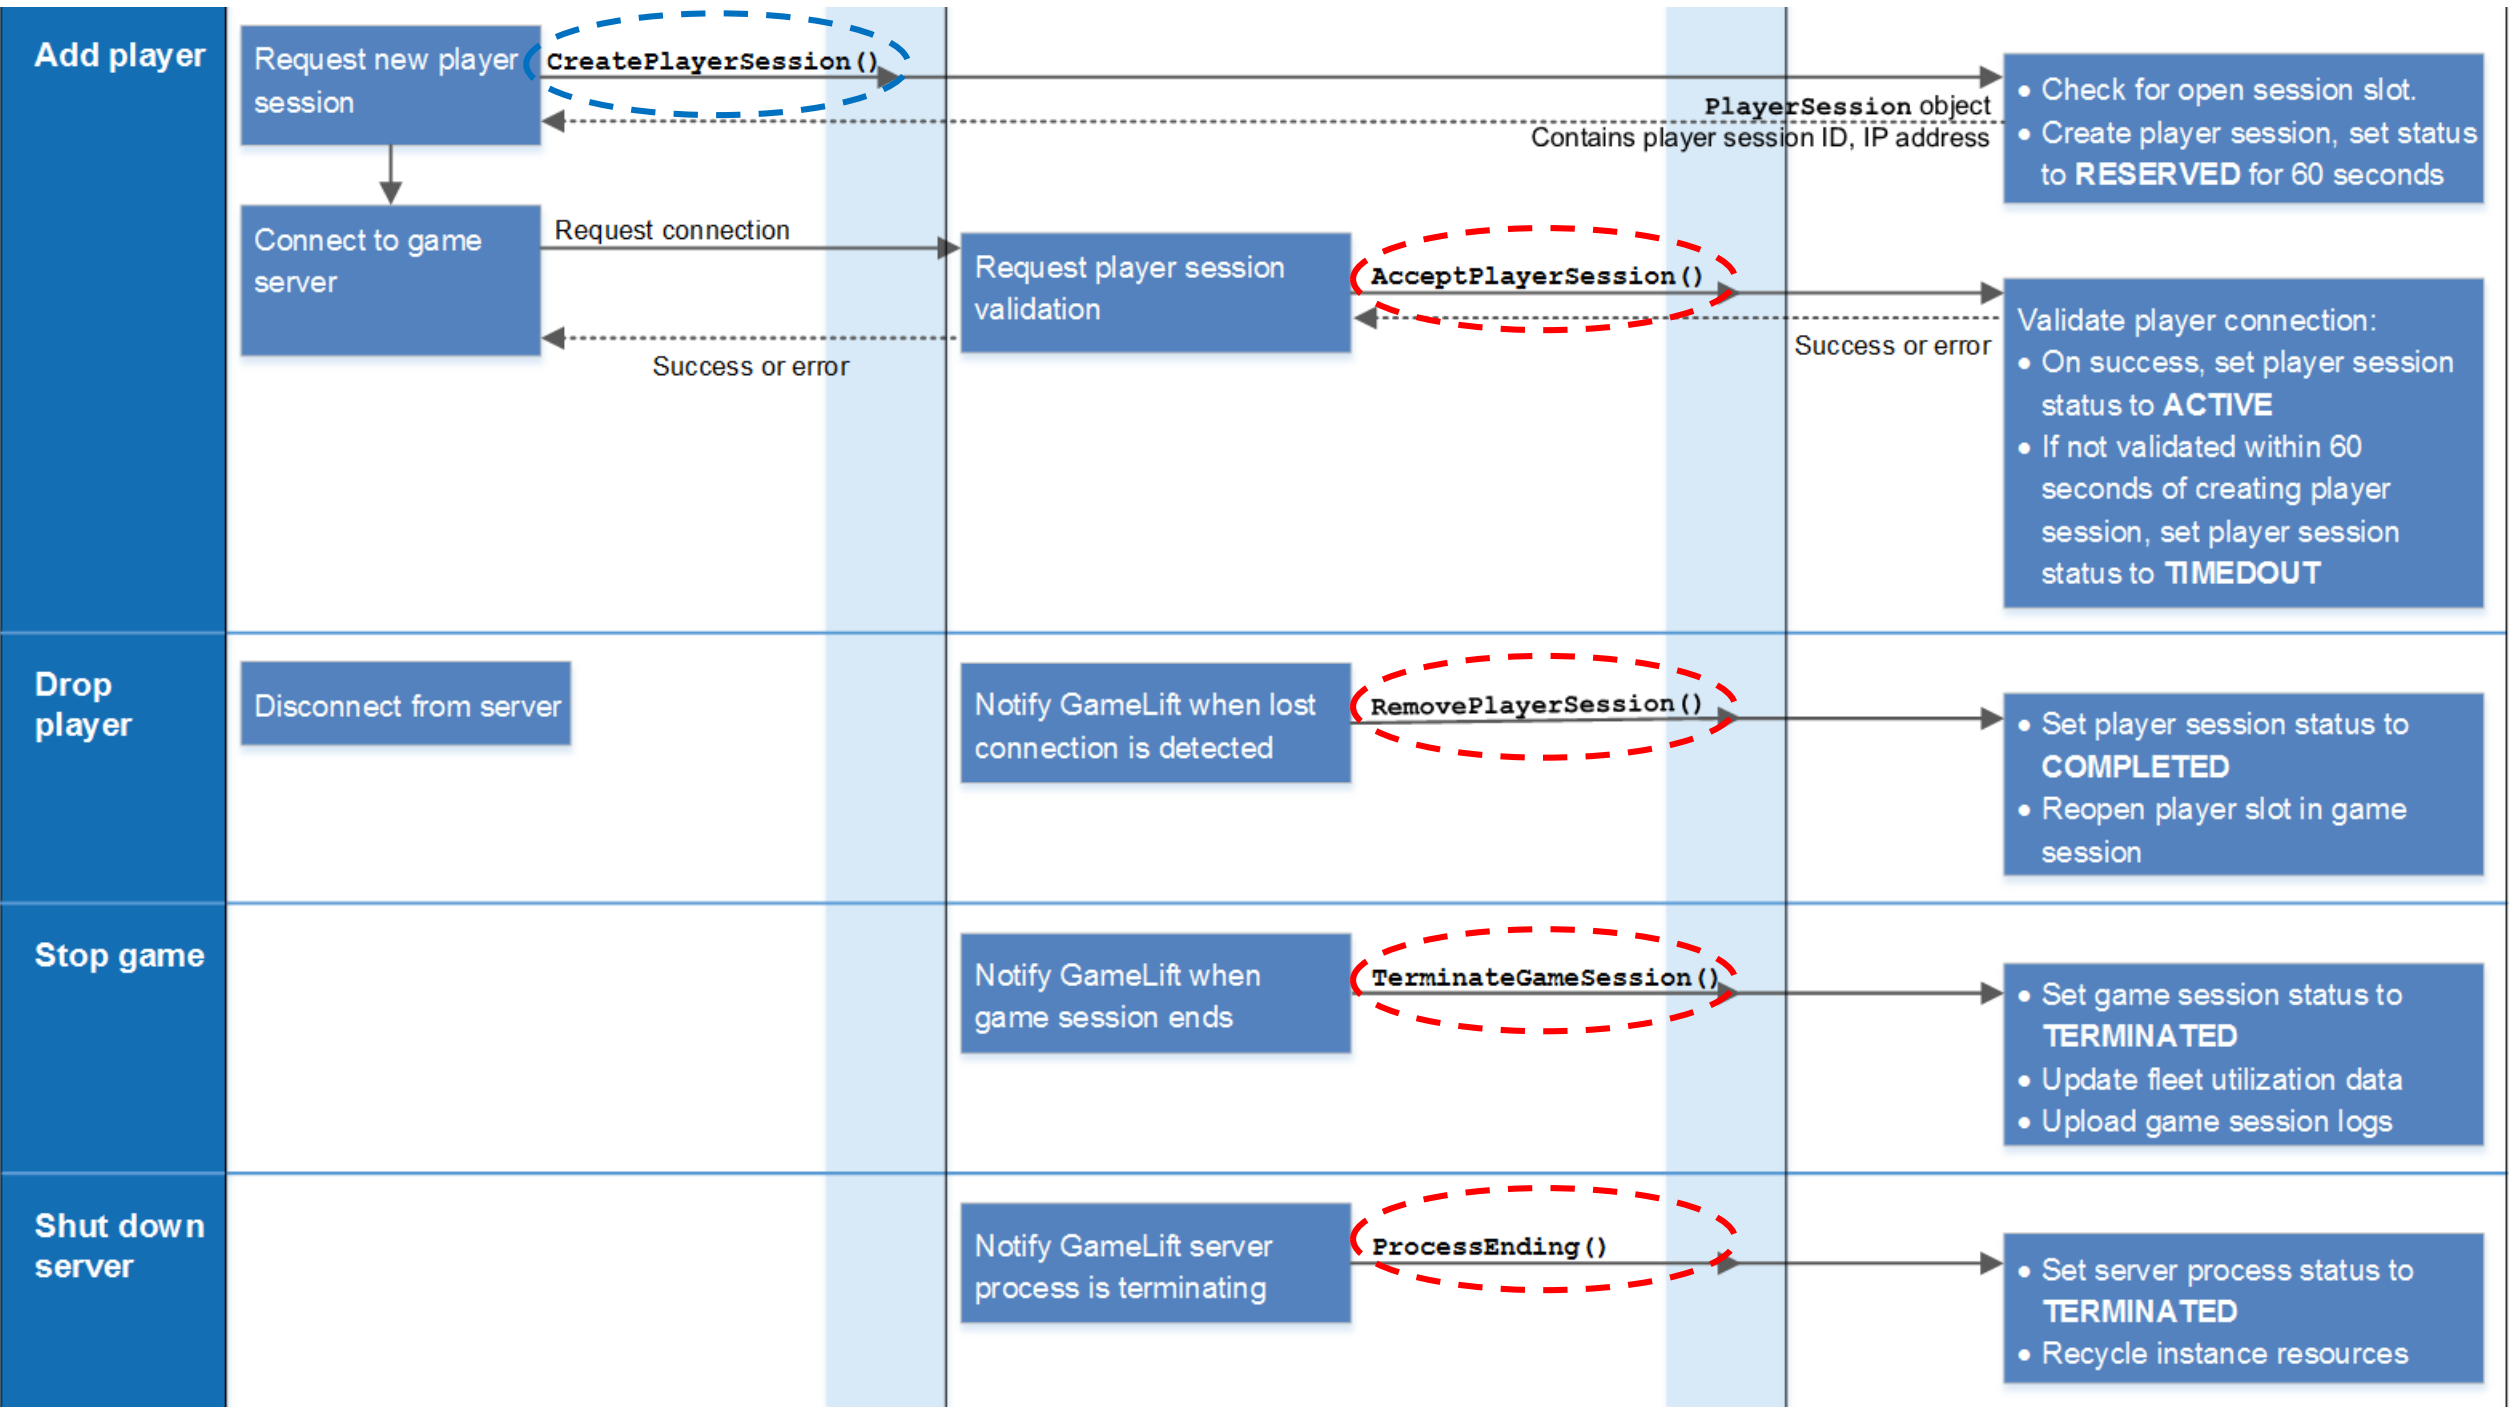

| Status | Fleet name | EC2 type | Active | Desired | Active ... | Player s... |
|-------------|------------------------|----------|--------|---------|------------|-------------|
| Downloading | MyEduServerFleet-11 | c3.large | 0 | 1 | 0 | 0 of 0 |
| Active | MyEduServerFleet10-LOG | c3.large | 1 | 1 | 0 | 0 of 0 |
| Error | MyEduServerFleet9 | c3.large | 0 | 1 | 0 | 0 of 0 |
| Active | MyEduServerFleet8 | c3.large | 1 | 1 | 1 | 1 of 8 |

- Status: **Downloading** → **Validating** → **Activating** → **Active**
- **Active**: Clients can connect to Fleet

GameLift API Interaction

GameLift Server SDK

- For a Game Server
 - Currently, only in C++ but supports C# soon
 - Windows Server and Amazon Linux
 - <https://aws.amazon.com/gamelift/getting-started/>
- FYI: GameLift Client API
 - AWS SDK itself
 - Supports many languages: C++, C#, Java, Python, ...

GameLift Tips

- Logs & Memory dumps for a Game Server
 - Debugging a game server on a Fleet
 - How-to
 - Upload a Build with "logs" folder
 - Implement to make a game server leave text logs and dumps into the "logs" folder
 - Download "logs" folder in AWS management console

Game session: [gssess-8796f9aa-5180-4382-9062-1a64de0c8515](#)

Monitor metrics for your game session, player sessions, events, and server hardware.

[Download log](#)

| Status | Name | IP address | Port | Protection | Player sessions | Player session creation policy |
|------------|--------------------|---------------|------|---|-----------------|--------------------------------|
| Terminated | MyTestGameSession1 | 52.196.72.205 | 5999 |  No protection  | 0 of 8 | Accept all |

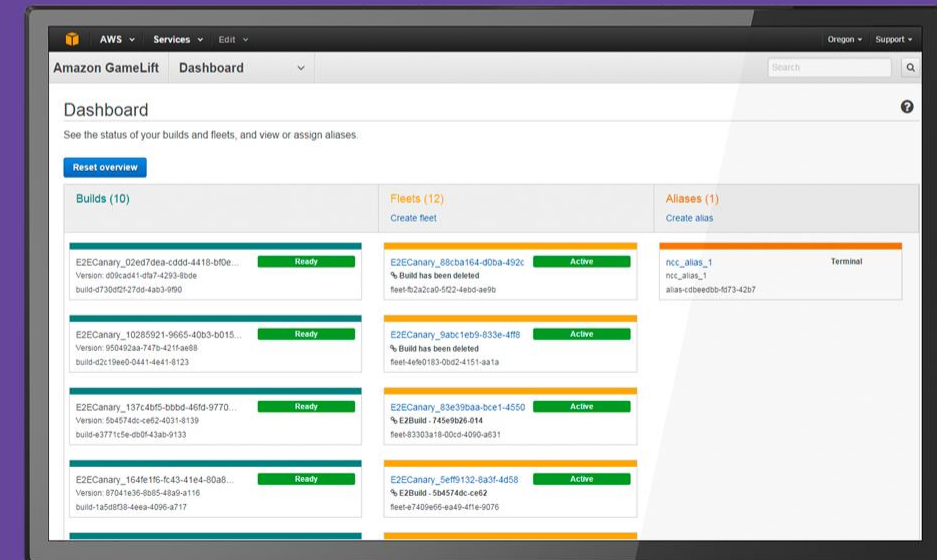

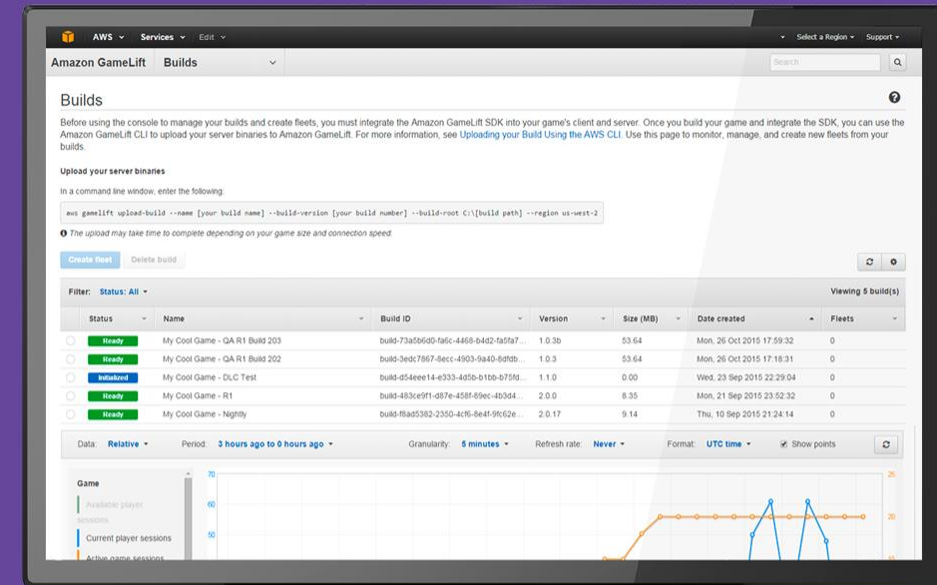

- Authentication
 - Access control about GameLift API called by a game client
 - AWS IAM
 - Web Federation such as Google ID and Facebook ID
 - OpenID Connect (OIDC), SAML 2.0
 - Amazon Cognito
- Installing custom programs on Fleet instances
 - Apps on dependent with a game server program
 - Scripting: install.bat for Windows, install.sh for Linux
 - Should be included in a Build

GameLift Operation

Web-based UI

- Can use API, too
- Measure performance
- Scaling
- Event
- Game sessions and player sessions
- Deploying updates by using ALIAS
